

## **Feature Enhancement: Dynamic Dashboard Filter & Detail View**

Enhance the existing Dashboard page UI and functionality to support dynamic dashboard filtering, detailed drill-down tabs, and detailed data tables with filtering/search capabilities.

Refer to the existing Dashboard UI attached in the reference image.

---

### **Objective**

Provide users the ability to:

- Select one or multiple Dashboard filters:
    - Workflows
    - Executions
    - Performance
    - Tokens
    - Trends
    - Library
    - Users
  - Dynamically render sub-tabs based on selected filters.
  - Display detailed tabular drill-down data for the selected sub-tab.
  - Provide search, filtering, sorting, and aggregation capabilities inside the detailed view.
- 

### **Functional Requirements**

#### **1. Dashboard Filter Selection**

Enhance the existing top filter section:

Current filters:

- Workflows
- Executions
- Performance
- Tokens

- Trends
- Library
- Users

### **New Behavior**

- Allow:
  - Single-select mode
  - Multi-select mode

### **UI Requirements**

- Filters should behave like selectable chips/buttons.
- Selected filters must appear highlighted.
- Multiple filters can remain active simultaneously.

### **Default Behavior**

- By default:
  - "Workflows" filter is selected.
  - First tab of the selected filter is automatically active.

---

## **2. Dynamic Sub-Tab Rendering**

When a filter is selected, dynamically show related sub-tabs.

---

### **Workflows Filter Tabs**

When "Workflows" is selected, show:

- Total Workflows
- Active Workflows
- Draft Workflows

---

### **Executions Filter Tabs**

When "Executions" is selected, show:

- Total Executions

- Running
  - Completed
  - Failed
- 

### **Performance Filter Tabs**

When "Performance" is selected, show:

- Avg Duration
  - SLA Compliance
  - Success Rate
- 

### **Tokens Filter Tabs**

When "Tokens" is selected, show:

- Token Usage
  - Token Trend
  - Token Consumption by Workflow
  - Token Consumption by Agent
- 

### **Trends Filter Tabs**

When "Trends" is selected, show:

- Execution Trend
  - Usage Trend
  - Failure Trend
  - Performance Trend
- 

### **Library Filter Tabs**

When "Library" is selected, show:

- Tools
- Agents

- Templates
- 

### **Users Filter Tabs**

When "Users" is selected, show:

- Platform Users
  - Active Users
  - User Activity
  - Top Consumers
- 

### **3. Sub-Tab Selection Behavior**

When a user clicks a sub-tab:

- Highlight the selected tab.
- Load detailed drill-down data dynamically.
- Show related KPIs and aggregation counts.
- Persist selected state while navigating filters.

### **Default Behavior**

- Automatically select the first sub-tab whenever a new filter is selected.

Example:

- If "Workflows" selected:
    - Default selected tab = "Total Workflows"
- 

### **4. Detailed Drill-Down Table Section**

Below the dashboard cards/charts, add a new expandable detail section.

This section must dynamically render based on:

- Selected Filter
  - Selected Sub-Tab
- 

### **5. Detailed Table Features**

The detailed table must support:

### **Search**

- Global search box
- Real-time filtering

### **Filters**

Provide contextual filters depending on selected tab.

Example for Workflows:

- Status
- Created By
- Created Date
- Last Execution Date
- Tags
- Customer

Example for Executions:

- Status
- Duration
- SLA Breach
- Workflow
- Trigger Type

---

### **Sorting**

- Column sorting
- Ascending/Descending

---

### **Pagination**

- Server-side pagination preferred
  - Configurable page size
-

## Aggregation Summary

Above the table show:

- Total count
  - Active count
  - Failed count
  - Avg duration
  - Success %
  - Token usage
  - Any relevant aggregation
- 

## 6. Table Data Examples

### Workflow Detail Table Columns

- Workflow Name
  - Status
  - Version
  - Created By
  - Last Updated
  - Last Run
  - Total Executions
  - Success Rate
  - Avg Duration
- 

### Execution Detail Table Columns

- Execution ID
- Workflow
- Status
- Start Time
- End Time

- Duration
  - Tokens Used
  - SLA Status
- 

#### **User Detail Table Columns**

- User Name
  - Role
  - Active Workflows
  - Executions Triggered
  - Token Usage
  - Last Active
- 

### **7. Dashboard Layout Requirements**

#### **Maintain Existing Dashboard Design**

Do NOT redesign the current dashboard.

Reuse:

- Existing cards
- Existing spacing
- Existing visual style
- Existing charts
- Existing color palette

Only enhance functionality.

---

### **8. Technical Requirements**

#### **Frontend**

- Use reusable configurable components.
- Implement dynamic rendering based on metadata configuration.
- Avoid hardcoded tab logic.

Suggested structure:

```
{  
  "filter": "Workflows",  
  "tabs": [  
    "Total Workflows",  
    "Active Workflows",  
    "Draft Workflows"  
  ]  
}
```

---

## Performance

- Lazy load detailed tables.
  - Avoid loading all dashboard data initially.
  - Use API-driven pagination/filtering.
- 

## State Management

Maintain:

- Selected filters
  - Selected tabs
  - Search state
  - Applied filters
  - Pagination state
- 

## 9. API Expectations

Create backend APIs to support:

- Dashboard summary metrics
- Filter-wise tab metadata
- Detail table data
- Aggregations
- Search/filter/sort/pagination

---

## 10. UX Expectations

- Smooth tab transitions
- Loading skeletons/spinners
- Empty state support
- Responsive layout
- No full-page refresh

---

## 11. Multi-Filter Behavior

If multiple filters are selected:

- Render sections independently for each selected filter.  
OR
- Use accordion/card layout per filter.

Example:

- Workflows
  - Tabs
  - Table
- Executions
  - Tabs
  - Table

---

## 12. Deliverables

Implement:

- UI enhancement
- Backend APIs
- State handling
- Dynamic metadata-driven tabs
- Detailed tables

- Search/filter/sort
- Aggregation summaries
- Responsive behavior

Ensure backward compatibility with the existing dashboard implementation.
